DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 4 and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Matsushita (JP 11348149).

Matsushita discloses a conductive roller for OA (paragraph [0001] of the English translation) whose rubber part is constituted of rubber containing recycled rubber (abstract), wherein the content of the recycled rubber in the rubber part is about 20% by mass (paragraph [0037] of the English translation), and wherein the conductive roller is produced by pelletizing rubber separated from a rubber roller, mixing it with virgin pelletized rubber and extruding or injection molding the recycled and virgin rubber to form the conductive rubber roller (paragraphs [0013] and [0027] of the English translation).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2 and 3 are rejected under 35 U.S.C. 103(a) as being unpatentable over Matsushita.

Matsushita discloses a conductive roller as shown above. Although Matsushita does not specifically disclose the conductive roller being provided with conductivity by ionic conduction or electronic conduction, however Official Notice is taken in that it is conventional in the art to provide conductive rollers with conductivity by ionic or electronic conduction.

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
